PRACTICE TEST 2 (100 QUESTIONS | 100 MARKS | 60 MINUTES)

SECTION I: ENGLISH LANGUAGE (Q1 – Q30)

Directions (Q1–Q8): Read the passage below and answer the questions that follow.

The rapid integration of generative artificial intelligence across corporate ecosystems has triggered profound structural shifts in modern labor markets. While routine administrative tasks and basic coding functions are increasingly automated, demand for specialized cognitive oversight, ethical governance, and complex system engineering has surged. Rather than precipitating total human obsolescence, AI functions as a powerful productivity multiplier, augmenting human capability. However, this transition exacerbates the digital skills divide, penalizing workforces lacking access to continuous reskilling infrastructure. Consequently, educational institutions and corporate training programs must pivot toward cultivating adaptive problem-solving skills and emotional intelligence—domains where human agency remains structurally superior to algorithmic processing.
