PRACTICE TEST 5 (100 QUESTIONS | 100 MARKS | 60 MINUTES)

SECTION I: ENGLISH LANGUAGE (Q1 – Q30)

Directions (Q1–Q8): Read the passage below and answer the questions that follow.

The rapid commercialization of CRISPR-Cas9 gene-editing technology has ushered in unprecedented therapeutic possibilities alongside profound bioethical dilemmas. While targeted somatic gene therapies offer transformative cures for hereditary monogenic disorders, germline editing introduces irreversible hereditary modifications that impact future generations without their consent. Regulatory frameworks currently lag behind the blistering pace of biotechnological innovation, creating dangerous loopholes for rogue practitioners and poorly supervised clinical trials. Furthermore, the commodification of genetic enhancement risks deepening societal inequalities, potentially creating a biological divide between those who can afford genomic optimization and those who cannot. Establishing rigorous international oversight and enforceable ethical guardrails is no longer optional; it is an existential necessity for safeguarding human dignity and biosafety.
